**The following pages include a selection from the thousands of original stories and drawings that the children in the Builders of the New World have created since 1995.**

**My imprint in this world will be my words.  
Just forget about the past,  
Just because forever can't last forever.  
That's why I want to make it better.**

**My imprint in this world will be my words.  
Words are the thing that makes me whole and keeps me attached and when I fall  
They bring me back.  
And when my heart turns blue and black,  
My voice will be true.**

**- Nikkia Holmes, Age 12  
2004 Builders of the New World graduate**

**Khalif Blake**

**Age 11**

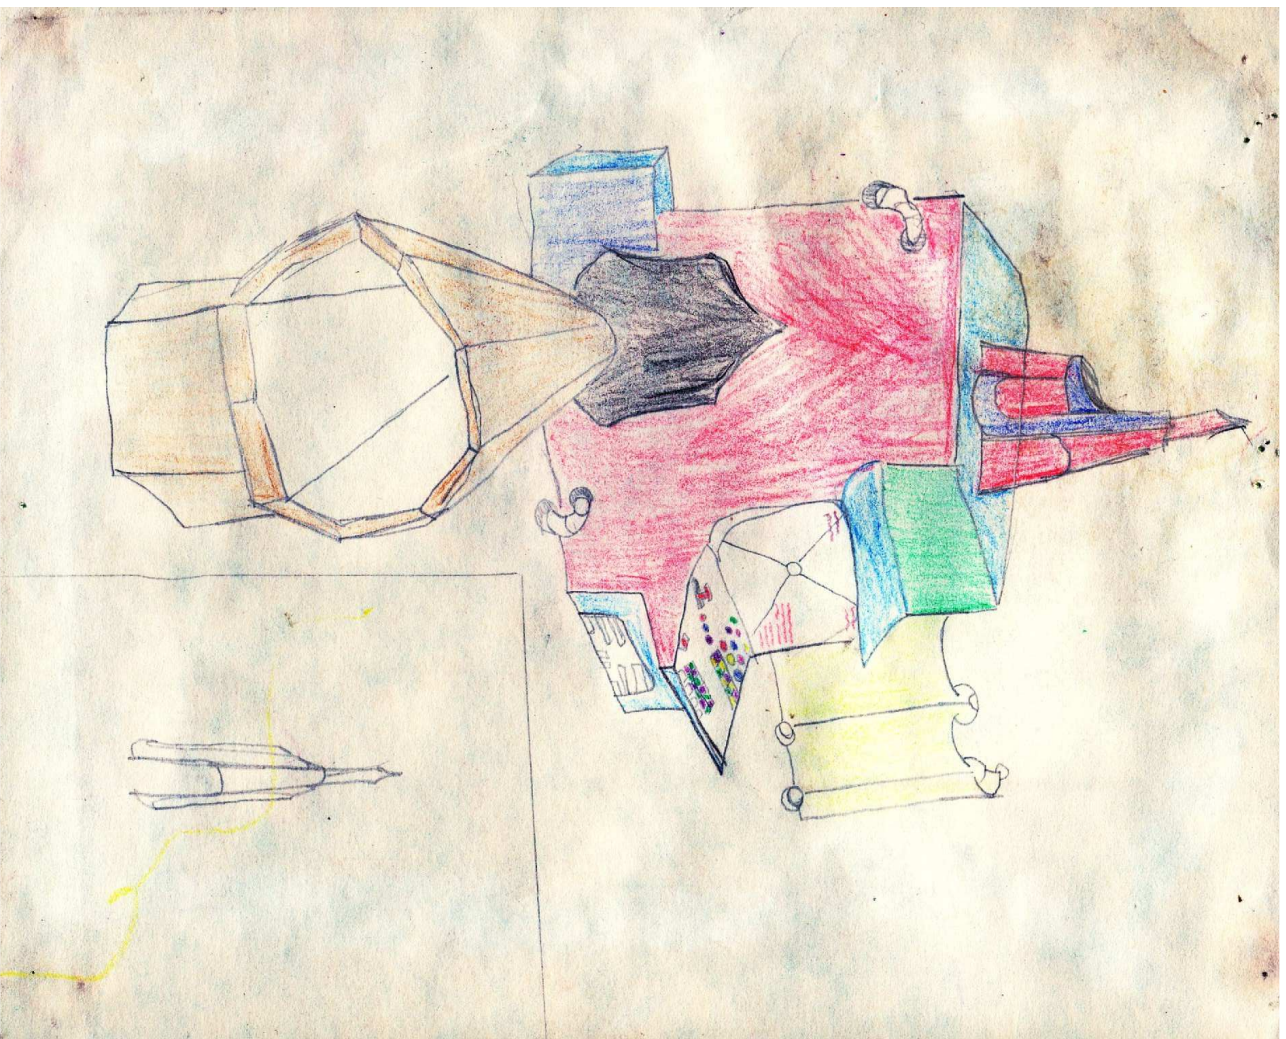

**Police Safety Station**

My police station is a space station. I called it the Police Safety Station because it is there to protect people from anything that will harm them. If they have problems they will press the elevator button to come up to the station from the earth. The elevator is fueled by water. When the water hits the side of the space ship it turns into energy that pushes the elevator.

When the people get to the station, if they have a problem, they will ask the police to put the handcuffs on them. The handcuffs are made out of flowers and they will make a person wearing them happy. When they're happy they do everything that's good. If they have kids, they treat their kids well. They give their kids money every day. They take their kids everywhere they want to go.

The walkie-talkie of the future, which they will use to talk to each other in space station and friends on earth, is shaped like a fish. They put it in the water and the water fuels it.

## Remi Gonzalez Age 11

### Life Restore Generator

This is sixty years in the future. We have high tech inventions. One of them is the Life Restore Generator. In the hospital most of the seriously injured patients come out alive, thanks to the Generator. It can take away diseases, **HIV**, **AIDS**, and Cancer and that flesh-eating virus, to name a few. We have high tech ambulances to get to the patients faster.

The great inventor of the Life Restore is **Dr. Remi A. Gonzalez**. Over the years he has been studying cures for diseases. On his search for cures he stumbled upon this glorious machine. He searched around the world for great wise men who know cures for such diseases in the world. First he searched in China. He heard that there was a great wise man on the mountain. He climbed up the mountain with his gear. It took him 16 hours to finally get to the top. The wise man answered alot of his questions. The wise man passed alot of his wisdom to Dr. Gonzalez. Then Dr. Gonzalez set off for Africa.

He had a little problem trying to find the great master of the sky. That's what the natives called him. I followed the road that a young man told me to go on. I reached his village then we went into his private room. He gave me some herbs passed down from generation to generation. He said to use it wisely or else it wouldn't work.

The next day I came to South America. I ventured through the Brazilian rain forest. Finally, I found the old man sitting on a rock. He greeted me and took me to his secret village. He told me all about the great rain forest. He gave me the way to the life-giving herbs. The natives say that it is very dangerous because of all the indigenous creatures and carnivores. On my way to get the plants I had no trouble at all. But when I took a rest, a monkey started throwing banana peels at me. He was being protective of his area. He was a great spirit in disguise.

I scooted to Australia the next day. I was looking for the wise man who called himself the Crook. When he was little, a crocodile bit off his arm. He was in his tent with his pet crocodile. First, when I greeted him, the crocodile tried to bite me, but he calmed the great beast down. He told me about the days in the outback. He told me about his life. Then he told me how he had fixed his artery problem. His liver was torn apart when the crocodile bit him. He gave me a lot of knowledge, then he said goodbye. Then I took a plane to Europe.

I went to the ancient forest of Europe. There I found him in the great mountains of Europe. He was balancing on the rock. If he would break his concentration, he would fall miles into the forest floor. When he finished, he saw me with my mouth to the ground. I was very astonished. We talked about his wisdom. He passed a lot of wisdom to me. He told

me about spirits changing into animals. While he was talking I saw a little bird chirping. He had finished his speech. Then I went home.

I noticed that the bird had the same eyes as the monkey that had been throwing banana peels at me in the rain forest. They were very similar in actions.

He is still searching to repair major damaged arteries. In twenty years he will find the cure and save the world from diseases or artery problems.

**How he built the Life Restore:** He found 20 superior engineers and started his campaign. He never thought that he would be so successful. The 20 men started to work at once. First, they designed the machine. In the future we have complicated tools. With these tools we build the machine from the bottom to the top. First, there is a tube we put the injured person into. Then laser beams seal his or her wounds. The computer generates herbs into his body and quickly starts to evaporate disease. When the process is finished she or he is ready to put there clothes on. It took 1 year to finish this project. Last thing we had to do was add the herbs to the medicine. One more thing we do is that we hook the plug for the power to be "on".

First we experimented on the raccoon that had Lyme disease. It was incredible. The raccoon recovered in half

an hour then, on our next experiment, we tested a human being who had **AIDS**. The doctor told us that he had two hours to live. When we turned the power on, he rested for awhile. When he woke up, they took a blood sample. Amazingly, he was cured. This was the beginning of the future. Lives would be saved thanks to **Dr. Remi Gonzalez**.

I gave these massive machines out to all the hospitals around the world. I didn't sell them. I just gave them away. I was proud for my accomplishment. I was happy to see more people happy than suffering. Now it is a better place in the world. It is all because of the hard work of the 21 men.

## **Sherelle Denise Walker Vaughn**

**Age 10**

### **The Learnbratory**

Welcome to the learnbratory. Where all people of shapes and sizes who can learn how to work computers. There's no dress code for the Learnbratory. The Learnbratory is six stories high, and has an exit at the 6th floor. You walk out the 6th floor and go down the escalator to the ground. When you walk in, there's a register table for everyone. When you get to the 5th floor, there is a metal detector because the boss's office is upstairs. Inside the building are stars. You can't see them but they are there.

Over 12,000 people are allowed in the Learnbratory at same time. The rooms are big and wide and over 20 computers can fit in each room. I am the boss of this Learnbratory. I make sure that everyone is satisfied with where they're working and who they're working with. There are teachers who teach students how to work on the computers. Certain people are elected to be member of the Learnbratory. They have small yellow cards to show they are a graduate of the Learnbratory.

There is a meeting room on the 5th floor, where they talk and think about electing new members who come to the Learnbratory everyday. So you should come. The Learnbratory costs no money and it is at the end of Sherelle Street, on the corner of Walker Avenue.

Children have their own floor for working. It is next to my office. Babies who come with their parents have a small nursery where they are looked after by my assistant and my assistant is Zakeya! She make's sure that the babies are happy and dry.

The Learnbratory is fun and educational so you should come and be a member of my fun successful business.

**Wonjerica Johnson**

**Age 10**

**Keeping the Earth Clean**

I have started a group of people to help me keep the earth clean. My partners consist of my neighbors. I leave them in charge when I go to the store to get shovels, gloves, and sanitary masks to cover our faces. First we put the recycling bins in and around the park. The people put the paper into the bins which lead underground to the recycling machines. The garbage rolls down the tubes into these machines.

The recycling machines come in many shapes and sizes. The machine that recycles material into balls looks like a big square marshmallow on a stick. The garbage goes in the tube one way. When it gets into the center of the tube, it gets squished, turns into a ball and rolls through the tube and falls out into a paper bin.

The machine is four feet long and five feet tall. It is made partly of very strong, stiff paper. But the part that molds the garbage into balls is made of a very hard substance: diamonds.

The machine can make more than one shape. It has lots of molds. If you want to make a heart shape, press this button. For a line, a twisted shape, a triangle, rectangle, oval, or diamond shape, you press these other buttons. You can also make letters. The material becomes like ceramic which we can use for statues, sculptures and for building. It is painted and made beautiful. This encourages other people to help clean the earth. They see the beauty and the magic and this will inspire them to help.

After many years of hard work, the earth will be shaped like a beautiful heart.

## **Daequan Andino**

**Age 11**

### **World In 50 Years**

My world is "New". Do you remember Daequan's Apartments? It has gotten bigger! And the mountains and woods have turned into an action park. The water park grew bigger because it rained a lot. My action park has a roller coaster. The dance mansion has become really big and turned red because people shake it too much. The dance headquarters now has more people because a lot more people are hired now. There is no unemployment.

Daequan's Apartments has Monique's (my mother) Fashion Department Store, a parking lot, a diner where you can eat anything you want, and Daequan's Hotel, where all the good people are invited to stay. We have a great security system. The see-through garage has new cars shaped like dinosaurs!

Instead of the road to earth, there's a "Road to Europe." The earth's countries become bigger and all connected because of the earthquake!! The blue house grew bigger and there are more spaceships.

**Daequan Andino**  
**Age 12**

**The United States of Daequan**

My community exists in the future in the year 2059. In my community both nature and technology are important.

The heart of the community is a Village in the middle of the forest where People and animals live together in harmony. Fifty-eight years ago, a meteor crashed into the stream. It let loose gasses from space that turned everything different colors - even the people. The meteor was steaming and so heavy that the people couldn't move it.

The animals and the people needed water to drink so they drank from the stream. When they drank the water gasses from the meteor began to change everything. Their hair changed to dark colors like dark orange and gray. They stopped killing the animals because they realized we are all God's creation.

All kinds of animals came to live with the people. The villagers decided to only eat vegetables and fruits like lettuce, carrots, potatoes, Bananas, berries and pineapples. In the Village there is a restaurant, a town store and a meeting hall. The restaurant serves vegetarian and fruit dishes. People create the menu themselves – they tell the Chef what they want and he makes it. Whatever you need in the village is there for you

One day the scientist's of the village were swimming and discovered clay at the bottom of the stream. They mixed it with rock, dirt and leaves and found out it could hold up a lot of heavy weight. So they started constructing buildings. And then part of the village evolved into a city.

Some of the villagers didn't like the new city, so they went to the scientists and asked them to build a glass shield over the village. Once the shield was up, the scientists kept building the city. In the city, there is a flying taxis, and an apartment building. That's where I live. I am the president of USD – the United States of Daequan.

Computers and robots run everything so people can relax and do what they love. This freedom has created a city of great architects, brilliant inventors, magnificent artists, hard working athletes, thorough exterminators, excellent teachers, fair and compassionate legal professionals, and curious scientists.

The city has a computer tune-up shop for robots and flying cars. There's a time machine that can take you to the past like 1999 or the year 2000. People travel in Tubes to get around the city. There's a restaurant in the city that serves everything including meat.

There's no gravity in the new city because when the scientists went up into space to do research they tore a whole in the o-Zone layer. But the scientists built a tube that comes down into the village so the people up above can come down into the village to visit. They built this so that the people from up above can feel nature's gravity and to bring their spirits up.

## **Jovana Beaulieu**

**Age 10**

### **Story**

This is the story of Jennifer. She lives in the Rainbow House with all kinds of shapes and sizes. It has rainbow colors. You can always spot the Color House from anywhere.

She lives in a colorful community. It has lots of houses and stores. Over 2,000,000 people live in the community. The community is called Color World. The people in the community work and help out.

Jennifer lives in the Rainbow house with her family. Flowers are in every room. The windows on top of the house are to provide sunlight for the flowers.

Everyone who lives in the house must wear rainbow clothing. If you come to the house not wearing rainbow clothes the rainbow house will magically change your clothes to rainbow colors. When you leave the house your clothes change back.

Jennifer was dreaming about being a teacher and she didn't know what she wanted to teach. She decided to be a love teacher. Love is an important part of a friendship and a family. It lets us help other people. When I feel love and encouragement, then I can help others feel that way too.

She travels around the world. She puts up flyers that say "If you want to love someone, come see Miss Jennifer and she'll teach you how to love."

Jennifer teaches the whole world about love. She learns all the languages of the world and teaches mean people to love.

When she sees a person who needs love, someone who is poor and alone, She hugs them, kisses them, gives them shelter and food and love and cleans them.

That person she helped, then goes out and helps someone else. That person shares and spreads the love. And it just continues.

This city became a model for other communities. And Miss Jennifer went to other towns and taught the people about love.

This world is made up of many different colors. When you look at the sky you can see that it is all different colors intermixed. When you have many colors together you have a rainbow, a new color – the color of the new millennium.

When you look at the Rainbow house you see squares inside of squares, inside of squares. Each one leading to another square. This is like the layers of color and layers of emotions that you find in people. There is a big gray square on the side of the house. Grey is for mean and ugly emotions. But even in the gray square if you look inside down deep you will find a red center just like a heart. So the lesson to learn is that even when you see a big gray box or a mean person – if you look deep down inside, you will find their heart where love lives.

## Ashley de la Paz Age 10

My picture is about the World Trade Center and what the ashes will bring to you and the people that lost their loved ones. Guardian angels will watch over the World Trade Center and the people of New York. I drew butterflies because they are peaceful and not harmful. They are very beautiful and bring joy to people's lives.

I drew a crying eye. The eye hurt so much on the day of the crash, that it cried. I think it will get better by understanding what happened in the past. I think that if everybody got along and tried to understand unique people, the World Trade Center and other bad things would not happen. That's why I have a "love" balloon in my picture. The love balloon brings different people together.

I have a vision of what I want the World Trade Center to become. I want it to become a beach with an ocean and beautiful weather where everyone comes together. Lots of people enjoy the hot weather. They go to the beach and the movies and they like being with each other.

In my vision of the new World Trade Center, the buildings would be rebuilt and have a special design that would describe the happiness and the flag of the United States. Something special could happen there and everybody would thank Mr. Scott for all his help.

This is what I think, and this is what I hope the World Trade Center will become.

**Daquan Burns**

**Age 10**

**Peacefulness**

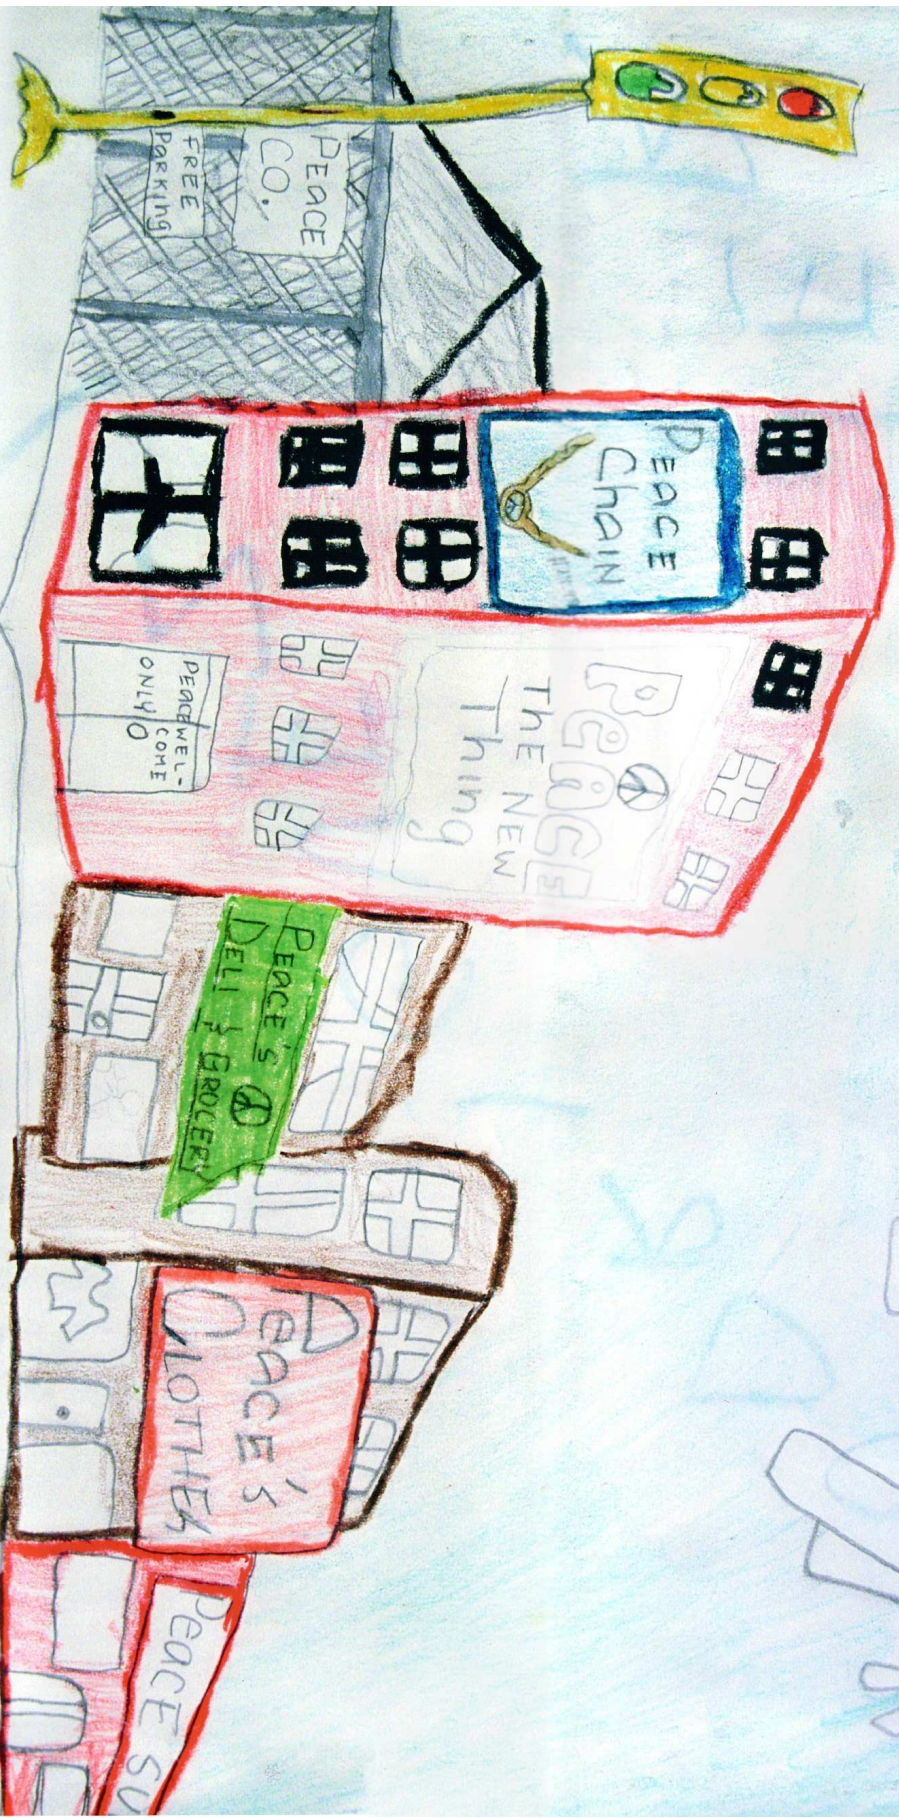

Hello, my name is Daquan and my story is about peacefulness. Peacefulness is about learning how to be good, and how to be without crime.

God made a bulb with light coming down from it. The light is working for peace. The light goes into the minds of the people and they think good thoughts. This light came from heaven to earth. The light saves the angels, and then the angels bring peacefulness.

One day God and the devil were competing with each other. As God was creating the heavens and earth, the devil tried to stop him. The devil tried to toss God down to hell, but God quickly made concrete so the devil would get trapped in hell and stop being bad. God then made two suns, one for sunshine and one for the light of peace.

I think the mayor should have peace cops and they should take away bad things, such as knives, guns, bombs and weapons. They should just tell you to look up at the sun that makes peace and peace will go into your mind.

# PEACE LAND

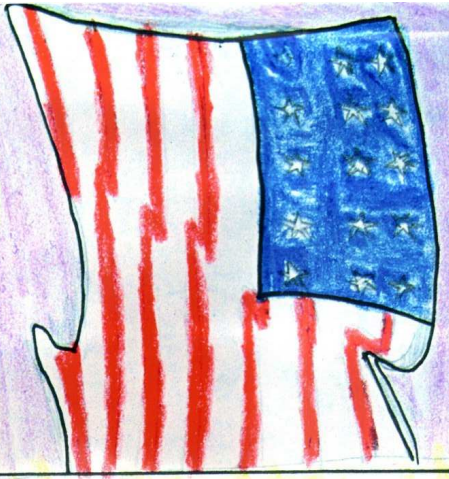

**Peter Rodriguez**

**Age 13**

**The Future**

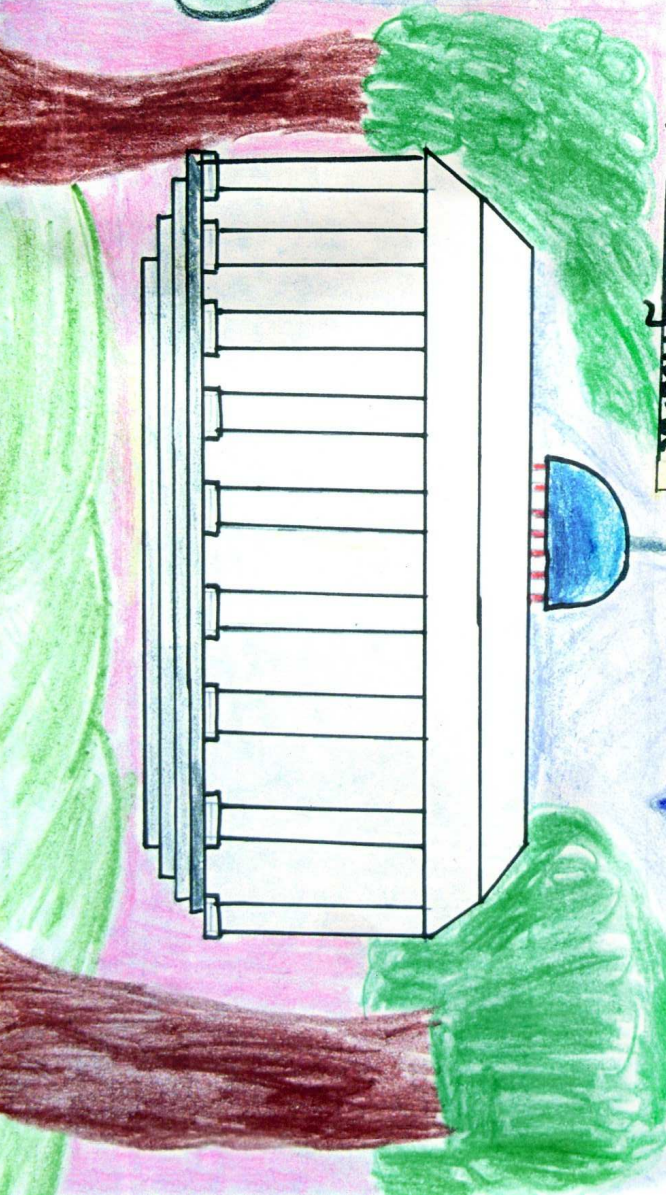

My ideas of the future are Revolutionary. Instead of people going to jail, they will go to clinics with mentors that will find new ways to make peace in the world. Things like new jobs and a family. My name is Peter Rodriguez and I am director and owner of C.P.M.C. (Criminal Peace and Mentor Center). A day for me is like living in a shelter for your whole life. In the past, I've seen many hurtful things. But this is the year 2072! And things are different now, because of my program. There are cars flying everywhere and buildings almost touching outer space! There are lots of police, but now they are called mentors. But for what? There's hardly any crime. There are no terrorists and there are more C. P.M.C. centers than you can count. Now, think about it-a future with no crime. MMMM.....that's great. And that's what your world can be like.

**Thank you and have a good night!**

2050 President Aayjivira

CES 126 Public School

**Ashley Rivera**

**Age 10**

**The First Woman President**

I am the first woman president of the United States of America. This is the year 2050. I want to make my country successful by giving poor people jobs and education. I want people who dropped out of school to get a good education and to experience a positive life.

I want people to do what they believe in and what is truly in their hearts. If they want to travel the universe, they should do it. My message is: don't drop out of school. Don't mess up your life. When you grow up, do the right thing. Stay in school, be respectful, and achieve your goals.

When you grow up, all you are going to need is yourself, your mother, your father, family and God. Sometimes life can be dark and negative, but that is only short term. Real life is about light, positivism, and love. Most of all, you need to love and respect yourself.

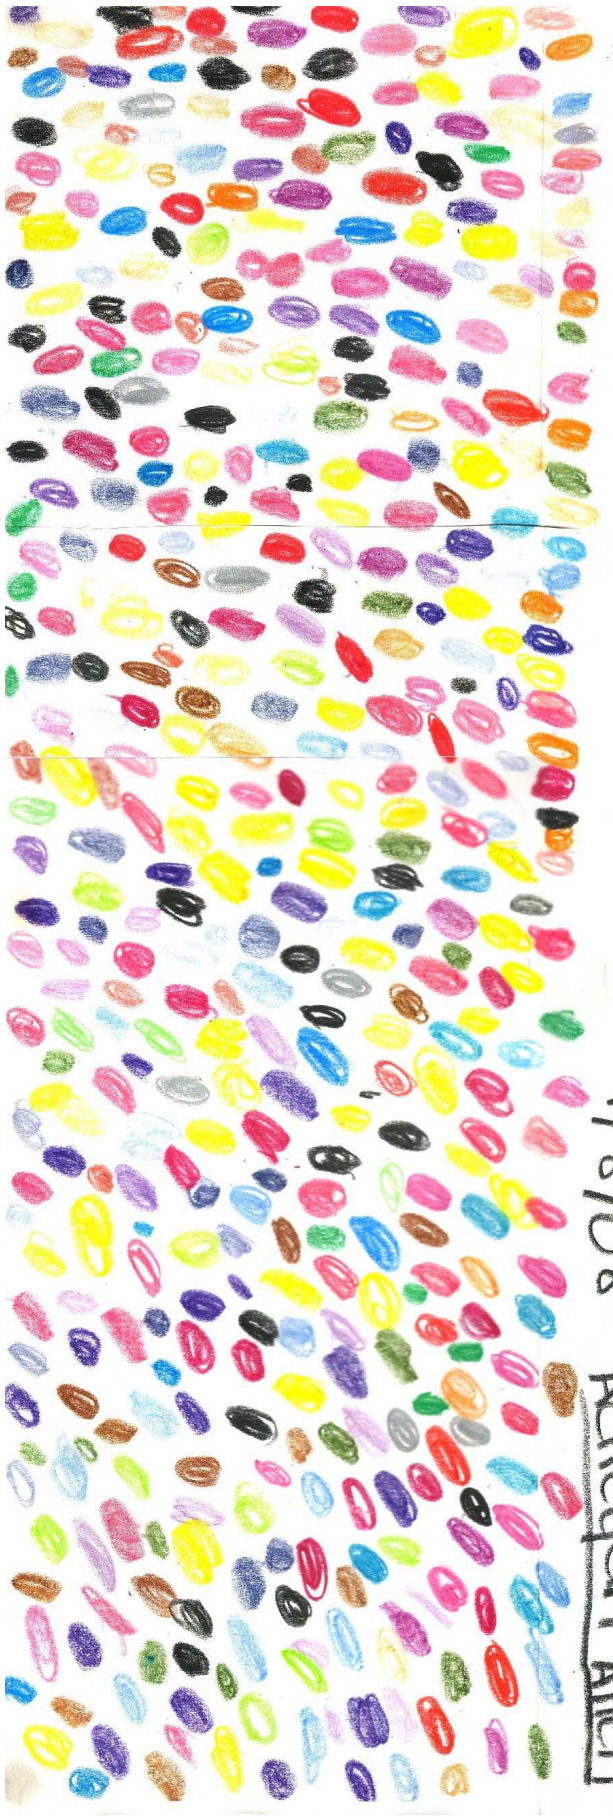

HELP MARTIN LUTHER

BRINGING  
BLACKS & WHITE

TOGETHER

1/8/08 ADVEYON ALLEN

**Aleyah Allen**  
**Age 12**

**Dr. King's Dream of Harmony**

Every January fifteenth is a special day because it is Dr. Martin Luther King Jr.'s birthday. This day reminds us to bring everyone together because it was his dream to make this world a better place.

Dr. King wanted to make positive changes in the world. He didn't like the fact that people were treated differently because of their color. He pursued his dream of fighting for the rights of everyone.

When Martin Luther King was born he always had a dream, but no one really listened to him because he was a little child.

As Martin Luther King got older and became a man, he was planning to make a big change in the world and that was bringing blacks and whites and every other kind together.

Martin Luther King died on April 4th 1968. Every year on January 15th, we will always remember Martin Luther King and his big dream.

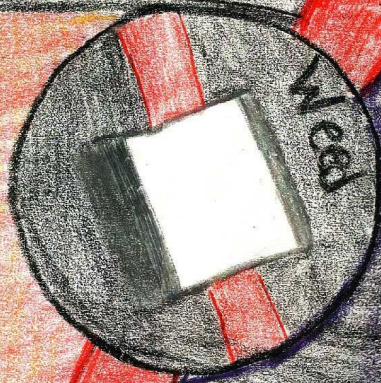

From that day many people can be together, but the reason why I drew this picture is not only because today is Martin Luther King's Birthday but because even to this day there are still racist people walking around us. Even though, Martin Luther King past away, lets just make sure that his dream really comes true.

Dr. King had a dream about creating harmony. With harmony, we have a chance to utilize the tools Dr. King left us with and to inspire individuals to realize their dreams.

With harmony, we create the possibility of universal change. Dr. King had a dream that all children, all individuals, all humans will be respected and given the opportunity to develop their god given gifts because when we develop this potential within ourselves and give to the community we create more harmony into the world, by respecting each other and ourselves.

# CUT OFF

**Belmarie Goris**  
**Age 13**

**My School to Teach Parents**

My name is Bel Marie and this is my story.

There are a lot of problems in the world because people are too removed from their spirits.

For example, people use drugs, give guns to kids, and try to get them to smoke.

I can create a world with no guns, drugs and fights. I imagine a school where parents must go to learn how to communicate with and understand children better.

My school is called, "The Institute of Learning How to Become a Parent and Say No to Bad Things," because parents do not know how to be a mother or a father. When they learn how to be good parents and educate their children to be good people, the kids will choose the right way and won't go astray.

Parents have problems because they do not know how to say no to bad things.

For example, mothers smoke when they are pregnant and parents don't know how to educate their children for the future.

Broken families make kids look for love and security in gangs. Mothers are violent towards their children not only by hitting them, but with the critical things they say.

We will build a society that respects all people, especially children.

## **Dream Telfair**

### **Age 8**

### **Hope and Magic**

My name is Dream Telfair. This is a magical city with hearts, stars, and flowers that flow through everything and touch our hearts and gives us hope.

My city has so much love and hope that it has two suns! They shine so bright that it teaches all the other communities around the world how to organize and have harmony.

I am the president of my city. I teach all the people that we must have generosity and help each other.

If you don't treat people with respect in my city, you are in big trouble. You will have to go to the "Learning Jail"! When you touch the heart on the door of the Learning Jail, it heals you and you only stay for one day. The steps are magic. When you step on one step, you magically get to the top.

Inside the college, there is a big red and purple heart that helps you study and gives you knowledge. It teaches you to think about the future and gives you more magic to invent new things to make the world better.

And the world is getting better by being generous and to help others and not to fight and not to rob because it is bad. In my world, there is no nonsense.

There are hearts, stars, and flowers to help solve problems. The Pink Star stops people from robbing. The Red Star makes people do the right thing all the time. The Blue Star is for getting money when you need it. The Purple Star helps people solve problems fast. The Orange Star helps people find their magic.

In my world medicine is in the candy. Candy is made out of food. It makes you feel good and gives you energy to heal your sickness. Jobs and schools are built on top of people's houses.

I have wings and I fly across the universe helping people all around the world. I teach people to work together and not to hurt one another.

In my city, there is a Key Food store where everything is free. There are soups, healthy crackers, and all sorts of vegetables. The store also has sweets like chocolates, lollipops, gold fish crackers, and beef sticks. These foods are special because they keep you full of energy.

In all of my drawings and in my community I am a leader and president. In my city I teach people to be good and nice. I am involved with all institutions in my community.

Zakey's  
ASTRONAUT  
HOTEL 1

South

HOTEL 2

Zakey's  
HOTEL

PARKING LOT

**Zakaya Walker**

**Age 11**

**Zakaya's Hotel for Astronauts**

If you are in space and after you finish exploring and you get tired and you don't want to leave space, you can make reservations in Zakaya's Astronaut Hotel. There is a special gravity room for kids where they can play with space toys. For the adults that like to read, you can come to the reading room.

Press the red button on the book and a voice will read it to you. Zakaya's hotel is located near Neptune. And my second hotel is a few blocks from Mars. There's a parking lot where you can land your rockets and space ships. When you park it, there's a purple button that says "Cleaning". Push it, and a cleaning robot will come clean and repair it. There are lots of windows so you can see all the stars, other planets, and if you look really close you can see the big dipper.

All hotels are free for astronauts. If you are a tourist, it's very cheap. 25 cents a night. There are elevators. One side goes up and one side goes down.

Anyone is welcome. The hotels are painted like all the flags of the whole world so everyone knows they are welcome. The walls and floors are made out of soft pillows. If you are so tired, you can just sleep in the hall, ask any worker for a cover.

The walls have stars and the names of all the planets in the universe. One wall has a map in case you need to find out where to go. For entertainment there is a space museum. There are bouncy floors and a dance club. We have astronaut food and drinks.

All activities are free. If you want to ask a question to anyone from another planet, they'll be at the hotel. It's a great way to learn about other people.

# Hotels for Astronauts Loan Proposal

## Zakaya's Proposal

I have this wonderful idea. I'm so excited about it. And I hope that you will be excited about it too.

### **What is your idea?**

My idea is to build hotels for Astronauts to go to while they are exploring in space and to give Astronauts more places to relax.

### **How does your idea support the community?**

My idea will serve the community by giving astronauts more places to rest because there are not many places for astronauts to rest. I will give out flyers to people that give them information about my idea for the hotels. I think astronauts are very helpful to us because we need astronauts to discover new things that might help us in the future. The hotels will give astronauts a place to rest while exploring space that is comfortable and makes them feel like their home because they might be tired from work.

### **How will you get community support?**

I will write a news article that will tell the people all about my idea. I will also have an interview on television so the whole world would know about my hotel. I will also contact the Community of other Astronauts.

### **How will you pay the loan back?**

My idea will make money by charging tourists. I will charge tourists 25 cents a night. Dinner will have to be paid for. It will cost \$80. Breakfast will cost \$18. I will have \$100 special tours to Mars which include: round trip transportation, picture in front of Mars, cocktails on jetcraft, food, bed, and tours on other planets. It will probably take me 4 years to pay the loan back.

### **Please tell me about yourself.**

I am very honest. I help an old woman that lives in my building carry her shopping bags up the steps. My education plans are to go to college and become a successful advertiser.

### **Who are your references?**

Brian Walker, Sherrille Walker, Elijah Walker, Ms. Janet Scott, Jeanne Korn, My 6th grad teacher Mr. Petekn. And my best friend Daequan Andino, Chris Graves, My Mom and Dad. You can ask my mother and neighbor more about how I like to volunteer.

<b>Total</b>	<b>\$3,0251,923</b>

**Shanice Andino**

**Age 9**

### **The Police Station of the Future**

Once there was a police station 50 years in the future. It was a really good police station that flies anywhere. The policemen and women arrested people who were really bad. If they were really, really bad, they put them in a cell that was locked to the walls. For the people who are a little bad, they sat in a chair with their hands tied with a rope to the back of the chair.

The police give the prisoners food. The policemen and women call out and say “Phone, come here” and then the phone comes, because that is the phone of the future and they use it to order food. Then the police untie the prisoner’s hands from the back of the chair and let them eat. The police give the prisoners services, and let them go to the bathroom.

Across the street there is another station. It is called Policewomen. They help people by saying “Tell me, what’s happening to you.” That makes the citizens feel good because the policewomen want to help them. And the girls wear short dark blue sweaters, and red shirts and shorts. I designed these uniforms because the girls should wear girl’s stuff. I hope that the citizens like the policewomen’s clothes, because I think the clothes are special.

My police station will help the community by arresting the bad guys, so they won’t ruin the world. The people will feel good. They can go to the store. They can have good families and good friends. They can go to school safe, so they can have an education. They can move on to the next grad, and on to high school, and on and on. They will go to the president, and he will give them jobs. The President runs the world. He teaches them right from wrong. He gives an award to the police for taking care of the bad guys and girls.

The police teach them not to rob and steal. The police talk to the guys. They ask them “why did you do all that?” They make them write down rules: stop killing and stealing, and they ask the bad guys to put that inside their minds. Then the bad people start to like people, they give the homeless jobs, give the poor jobs and let them go to school to learn things and give them decent clothes.

# Shanice Andino

## Police Station of the Future

### Loan Proposal: Executive Summary

#### Shanice's Proposal

I have this wonderful idea. I'm so excited about it, and I hope that you will be excited about it too.

#### My idea

My idea is to have a police station in space. It protects the community from bad people. The station works with trained policemen and women. They are kind to the bad people. The police teach the people not to commit crimes. They talk to the criminals and ask them to write down the rules and then get the rules in their head. Then bad people change and contribute to the community.

#### How my idea supports the community

It makes the community safer and provides jobs. Also, it protects families and friends.

#### How I will get community support

I'll talk to people and explain that we need to have our community clean.

#### What I'll use the loan for?

We will build 3 things

- a prison
- a police station
- a school to teach the prisoners math, science, and art.

We will need \$5,000,000 for the buildings and for salaries, 6 teachers, 5 policemen and women, 2 prison guards, and 10 people inside.

#### How I will pay the loan back

The Prisoners will pay us money when they go back to the community and get jobs. We are doing this because we trained them when they were in prison. They will pay \$300 out of every \$1000 they earn. People in the community will pay because we are helping them by making the community safe. They'll pay \$1 a person. There will also be a Tax on Business of \$20,000 a year.

#### Some important things to know about me

I'm an honest person. I'm hard working. I'm respectful. I have plans to improve the community. I plan to go to college and high school.

Jessinia Roman, Chris Graves, who works with children, and Monique Ardino, she is going to school and getting an education

## **Loan Proposal**

My idea is to build police stations in space, create prisons in space for criminals and remove criminals so they won't ruin the world. It will help the community by making it safer and protecting my family and friends. The people in the community will like this idea because it helps and cleans up the community and creates rules for the community.

I'll use the loan to build police stations and prisons. There will be jobs in the stations, there will be classes (math, science and art). We will arrest prisoners and teach them right from wrong.

I will need \$5 million to build the combination police station, prison and school.

I will pay the loan back by charging those we help (criminals and prisoners that we've educated and who have returned to and taken jobs in the community). Say there were 5,000,000 people in the world and they each gave me a dollar.

We will charge those people in the community that benefit from improving the community by removing the criminals and making them productive members of the community. Each business will give \$2 for tax and property rental at their business and that will help repay the bank as well. I will repay the money in ten years.

The reason the bank should lend me the money is I am honest, hard working, positive and respectful. I have plans to improve the community. I am intelligent and I have borrowed in the past. Jessinia Roman is my reference.

**Zaire's Speech to the World**

I have a dream that people will learn to make this world will a better place, so I've built schools all over the world. There are four different schools people can go to.

School #1: No guns, no gangs, no drugs. This is important because you don't want to mess up your life and go to jail.

School #2 is where people learn how to recycle, because we want the water and the ground to be cleaner so people will be healthier. The world will be clean with turquoise blue water and fresh green grass.

School #3 is where people learn how to have peace, teamwork and respect for others. They will make speeches all over the world, and work to get rid of war.

School #4 is where people to learn to be doctors, scientists and market-keepers who sell food.

The people who go to my four new schools will graduate. Then they'll become managers and pass on their knowledge to others.

THE WAY I'm going to accomplish my goal is to get a Diverse Education myself.

I will study Global Warming. I will study Science, Chemicals, Elements and Dense matter.

I will also study people from history who have worked for PEACE, like Rosa Parks, Martin Luther King, Gandhi, Abraham Lincoln, Mr. Thurman, and Nelson Mandela.

I will help teach others that we can change our lives and make the world happy instead of fighting.

Together, we can impact and change the world.

**The Land Called...“Be Peaceful”**

I wrote this story because I want to tell the world how important it is to think clearly about your actions before you do them. Right now there are many people in jail who were not thinking about the consequences of their actions and now they regret them.

My story is about a world where being kind and free is the norm. The land is so quiet and peaceful. No one here can fight or steal. Everyone is nice and always shares. There is no killing at all. People love going to see the “Remembering Fountains” that are there to help remember the good times. My father and my mother like walking by the “Remembering Fountains” to remember all the good times that they shared with our family. My brothers Zach and Josh like going the library to check out books about science, the earth, space and time.

I wanted to create a world that was peaceful, where nobody throws garbage on the ground or in the lake, where every living thing could be happy. I wanted to draw this picture so the world could learn to accept the powerful dreams and visions they have inside themselves.

## **INFRASTRUCTURE**

My town is called Sha Town. I believe that the world would be better off if there were more towns like Sha Town.

The first lesson we are taught in school is to be good citizens. We learn to relate to each other in ways that do not cause conflict, since the energy expressed in conflict hurts the environment.

There are plenty of trees and windmills that create harmony for the town. The friendly tone of trust helps people open their imaginations to different ways of improving the town's infrastructure.

The people of Sha town bring peace and fun by creating hybrid cars and lots of bicycles which conserve energy. The togetherness helps the people find ways to control the sun so we have solar energy. And the energy we've harnessed has helped us build a new structure of bridges that connects the residential and downtown areas together.

In this unique and green way of living the forest, schools, housing, and shopping centers are all connected. They all support each other's energy so much that everything is inexpensive.

There is a beautiful building sitting in the center of the forest where the government manages the town. The energy and harmony of the green trees touches the humanity of the politicians and they pass very humane and wonderful laws that help grow the town. This brings in new banks, schools and new openings for people that don't have jobs.

The magical trees fill the air in the wishing forest with wonderful smells and the politicians go to the window and breathe in the air. The trees grant the politicians' positive wishes to address any negative situations that will come up that day.

Homeless people are not looked upon as outcasts, because they are only homeless for one day. In that day, the kind and supportive politicians immediately come up with powerful ideas to address the homeless people's problems. They created a hotel that's free where the homeless people can stay until they organize their lives to start work on a new job that awaits them the next day.

Sha Town has produced a wonderful police behavior rehab center. It teaches individuals how to change their negative behavior by taking them to the edge of town where they stand in a long line of 20 at 5:00 each morning, breathe the air and make a wish as they stand on the edge of the forest. The forest can never be destroyed. If an individual cuts them down the trees are not threatened. They magically regrow. The more the people in the town act positively, the more positive the tree's magic is. The central purpose of the forest is the create deep clean air which grants wishes that makes the people happy and the town better.

**Angella Christian's Story**

I want to be an Obstetrician.

I've wanted to be an Obstetrician ever since I was three years old.

My mom took care of babies and kept their photos in an album.

Since then, I've wanted and dreamed of becoming a doctor. Before I get there, I have to go to school and learn how to take care of people.

In school, you have to learn about technology and nursing tech is the area that you really need to know because people don't use their hands anymore. We use technology. What would happen if the computer malfunctions while a child was being born? That is the reason why you have to go to school to learn about these things. I still have to learn more about the human body. I have to wait a few years until I do.

Some people say that it is hard to take care of kids.

However, I know how to do it. I can even do it in my sleep. People used to drop their kids off at my house because they know I can do it and that I have a passion for taking care of babies.
